

PC Software Accounting, Inc.

We are a long term provider of general ledger, payroll, and payables software; and as such, we have provided software to many different kinds of businesses and non-profit entities for many years. During this time we have had requests from clients to convert or interface their current systems with ours. Our current software has existing conversions and interfaces for more than fifty other versions of software. If you need a particular conversion or interface from some existing software, please give us a call.

We have also had many occasions to provide custom software for our clients when they have had a particular situation in their business that was non-standard; and yet, this situation would benefit greatly from custom software. Where it is appropriate to do so, we can interface any custom software that we program for your organization to our existing software programs, thus providing your organization with an integrated solution that is easier to use and more efficient. We can also program completely independent application that might be of great benefit to your organization.

One of the advantages that our company can offer you is that we understand both the intricacies of programming and the fundamentals of accounting and payroll. This knowledge helps us to provide efficient custom software. Our custom programming prices are very reasonable. ***Please give us a call at 800-237-9234***
